Logical Aspects of Model-Based Reasoning	1
A Case Study of the Design and Implementation of Heterogeneous Reasoning Systems	3
<i>Nik Swoboda, Gerard Allwein</i>	
1 Background	3
2 Overview	4
3 Some preliminary definitions	6
4 A framework for heterogeneous reasoning	9
5 Defining the notion of recasting for Euler/Venn and FOL	10
6 The implementation	16
A Logical Approach to the Analysis of Metaphors	21
<i>Isabel D'Hanis</i>	
1 Introduction	21
2 The interactionist view as a basis for a metaphor theory	22
3 Some problems with the basic formulation of the interactionist view	24
4 The advantages of adaptive logics	27
5 ALM , an adaptive logic for metaphors	28
6 Conclusions	35
Ampliative Adaptive Logics and the Foundation of Logic-Based Approaches to Abduction	39
<i>Joke Meheus, Liza Verhoeven, Maarten Van Dyck, Dagmar Provijn</i>	
1 Aim and survey	40
2 Why the reconstruction is important	42
3 Main characteristics of abductive reasoning	44
4 The general format	47
5 Introducing the dynamics	48
6 The logics MA1 and CP1	50
7 Generalizing to the inconsistent case	56
8 The logics MA2 and CP2	60
9 Two examples from the history of astronomy	62
10 Some alternatives	68
11 Conclusion	69
Diagrammatic Inference and Graphical Proof	73
<i>Luis A. Pineda</i>	
1 Introduction	73

2	Abstraction markers	75
3	Notational keys	80
4	The syntactic effect and reinterpretation	82
5	A diagrammatic inference scheme	84
6	Global reinterpretation	89
A Logical Analysis of Graphical Consistency Proofs		93
<i>Atsushi Shimojima</i>		
1	Introduction	93
2	Examples	96
3	Analysis	100
4	Physical on-site inferences	105
5	Summary	114
Adaptive Logics for Non-Explanatory and Explanatory Diagnostic Reasoning		117
<i>Dagmar Provijsn, Erik Weber</i>		
1	Introduction	117
2	Non-explanatory and explanatory diagnosis for faults in systems	118
3	Adaptive logics	122
4	An adaptive logic for non-explanatory diagnostic reasoning	124
5	The dynamic proof theory of \mathbf{D}^{nexp}	127
6	An illustration of \mathbf{D}^{nexp}	129
7	Formal analysis of weak explanatory diagnostic reasoning	130
8	Formal analysis of strong explanatory diagnostic reasoning	133
9	An adaptive logic for explanatory diagnostic reasoning	134
10	The dynamic proof theory of \mathbf{D}^{exp}	137
11	An illustration of \mathbf{D}^{exp}	139
Model-Guided Proof Planning		143
<i>Seungyeob Choi, Manfred Kerber</i>		
1	Introduction	143
2	Proof planning as a way of reasoning	146
3	Model-based reasoning	150
4	Semantic restriction and selection of methods	154
5	Implementation and initial results	158
6	Conclusion	160
Degrees of Abductive Boldness		163
<i>Isabella C. Burger, Johannes Heidema</i>		
1	Introduction: Cautious inference and bold conjecture	163
2	Abduction as defeasible inference	165
3	Merging inference and conjecture	168
4	Abduction via power relations	173
Scientific Explanation and Modified Semantic Tableaux		181
<i>Angel Nepomuceno-Fernández</i>		
1	Introduction	181
2	Modified semantic tableaux	182
3	Scientific explanation	184
4	Conclusions	190
5	Appendix	191

<i>Contents</i>	xv
Computational Aspects of Model-Based Reasoning	199
Computational Discovery of Communicable Knowledge	201
<i>Pat Langley, Jeff Shrager, Kazumi Saito</i>	
1 Introduction	201
2 Paradigms for computational discovery	202
3 Revising regulatory models in microbiology	206
4 Revising quantitative models in Earth science	211
5 Related research on computational discovery	219
6 Concluding remarks	221
Encoding and Using Domain Knowledge on Population Dynamics for Equation Discovery	227
<i>Sašo Džeroski, Ljupčo Todorovski</i>	
1 Introduction	227
2 Population dynamics modeling	228
3 Equation discovery	234
4 The equation discovery system LAGRAMGE 2.0	237
5 Experiments	239
6 Discussion	243
Appendix: The Prolog program for transforming the population dynamics domain knowledge into grammar form	245
Reasoning about Models of Nonlinear Systems	249
<i>Reinhard Stolle, Matthew Easley, Elizabeth Bradley</i>	
1 Reasoning about nonlinear system identification	250
2 Automated modeling and scientific discovery	256
3 Representations for model building	260
4 Orchestrating reasoning about models	264
5 Conclusion	268
Model-Based Diagnosis of Dynamic Systems: Systematic Conflict Generation	273
<i>Bartłomiej Górný, Antoni Ligeza</i>	
1 Introduction	273
2 Consistency-based diagnosis: Reiter's Theory	275
3 Causal graph	276
4 Graphical notation	277
5 Problem formulation	277
6 Strategy for conflicts calculation and diagnoses generation	278
7 An approach to systematic conflict generation	279
8 Potential conflict structure	280
9 An outline of algorithmic approach	282
10 Diagnoses calculation - elements of algebraic approach	283
11 An example	286
12 Conclusions	289
Modeling Through Human-Computer Interactions and Mathematical Discourse	293
<i>Germana Menezes da Nóbrega, Philippe Malbos, Jean Sallantin</i>	
1 Introducing φ -calculus	295
2 An experiment in LAW	300

3	A formal system for φ -calculus	301
4	Conclusion	308
Combining Strategy and Sub-models for the Objectified Communication of Research Program		313
<i>Ekkehard Finkeissen</i>		
1	Scientific objectification of decision-making	314
2	Strategy: Superior structure of discrete decisions	317
3	Embedding of sub-models into the decision-structure	322
4	Imbedding of intra-individual preferences into the decision model	324
5	Generating individual problem solutions with the decision model	326
6	Summary and prospects	328
